monitoring.py
runs with each build
alert
Project owner
Foundry notification on failure
monitoring_drift · historical replay (D009)
7 series: weekly from source dates,
per FAERS quarter · last 4 wk vs 4 before
ratio > 2 or < 0.5 = warn
recalls reported 10 vs 3 → warn
monitoring_checks · 21 rows appended per build (history kept)
Data judgment (3)
FAERS quarters in state = files
ranked without a label = 0
reporter type blank 72% → warn (DQ38)
AI (3)
grounded 448 / 448 (≥ 0.95)
section errors 0 · cache hit 1.0
→ pass
Freshness (3)
openFDA 8 d (≤ 14) · DailyMed 0 d (≤ 7)
FAERS 130 d after quarter (≤ 200)
→ pass
Keys + rows (12)
4 datasets × unique, not null,
row drop ≤ 20% vs last build
→ all pass
Builder reads the check rows
(dataset SQL) after each build
